

Inside of every female, are special organs that God gave you that make you a female. This is the most exciting part of all! These organs, your ovaries, and your uterus, or womb, will enable you and your husband, when you are grown and married, to have children of your own! And what a blessing they will be! Here's what will happen:

At around the time you start noticing the growth of this body hair on the outside, these fantastic changes are happening on the inside:

Your ovaries, which were placed inside your body by God when He formed you in your mother's womb, to make you a female, will begin to produce, every month, an egg.

---

This is not like the eggs that you buy at the grocery store, or gather from the hen house every morning, for those are chicken eggs, and we're talking about HUMANS here!

But, this egg, produced about once every 28 days, or so, will enable you, someday, when you are married, to conceive a child of your own, when joined with your husband's sperm cell. The two cells will become one, creating a human baby - God's precious miracle!!!
